

Fig. Extent of cephalic spread of sensory block. Data are from 4 dose-finding (○) and 5 single dose studies (□). The horizontal line represents equality. Vertical lines are 95% confidence intervals (CI). Symbols above the line of equality indicate that there is more cephalic spread of the sensory block with clonidine compared with placebo; when the 95%CI does not cross the line of equality, the difference is statistically significant. Overlapping symbols are separated for graphical purposes.
