

Fig. 4. Time to first request of analgesia. Data are from 3 dose-finding (○) and 6 single dose studies (□). The horizontal line represents equality. Vertical lines are 95% confidence intervals (CI). Symbols above the line of equality indicate that the time to first request of analgesia is prolonged with clonidine compared with placebo; when the 95%CI does not cross the line of equality, the difference is statistically significant.
